

Pandecta & Concierge Medicine: A Complementary Partnership

At Pandecta, we see ourselves as complementing concierge medicine services.

Concierge medicine is excellent at diagnosing and managing what is happening *right now*. Pandecta adds a new dimension: we show what's likely to happen *next*. By analyzing thousands of proteins in the blood, our Deep Protein Scan reveals early molecular changes that may signal future risks—often before they are visible on MRI or detectable through standard lab tests. This allows concierge physicians to monitor clients more closely, intervene earlier, and personalize care in ways that extend beyond today's diagnostics.

Think of concierge care as reactive excellence—we complement it with proactive foresight. Together, we give clients both assurance about their current state and insight into what's coming, enabling lifestyle changes, preventive strategies, and targeted monitoring. More than that, by mapping protein-level changes associated with underlying biological processes, Pandecta analysis helps physicians interpret ambiguous findings from routine tests (such as ultrasound, X-rays, CT) more accurately, connecting what may appear on imaging with the broader systemic picture. For high-net-worth individuals investing in their long-term health, this combination provides the most comprehensive, precise, and future-focused health strategy available.

Together: Concierge Care + Pandecta = The most comprehensive, future-focused health strategy

Value Added:

Comprehensive in One Test

Rather than ordering separate tests for each concern, our Deep Protein Scan analyzes hundreds of biomarkers and thousands of other proteins at once. This provides a broader view of your health and identifies patterns that may be missed with single-disease testing, while aiding with sensitivity and specificity of predictions.

The Ultimate Health Analytics:
Because You Deserve More

Interconnected Health Insights

Conditions do not exist in isolation. The same biomarker can signal risk across multiple diseases—for example, inflammation markers are linked to cardiovascular disease, cancer, and dementia. By analyzing multiple markers together, we provide a more specific and holistic picture of your health. Furthermore, by capturing the connections between systems—such as how metabolic health influences cancer risk or how cognitive health relates to immune function—Pandecta provides a 360° perspective on your health that standard testing cannot.

Cost-Effective Compared to Multiple Tests

Concierge medicine often orders a series of individual panels—lipids, inflammatory markers, cancer screens—many at additional cost, and each providing only a partial view. Pandecta integrates all of these (and more) into one scan. While comprehensive testing may seem like a higher upfront investment, it is actually more cost-efficient: one test replaces many, while offering greater sensitivity and specificity by analyzing multiple biomarkers at once.

Proactive Risk Detection

Traditional tools like MRI or ultrasound can only detect disease once it reaches a certain threshold. Our test may highlight risk earlier, before symptoms or imaging reveal an issue, giving you the opportunity to intervene sooner.

Personalized Health Planning

Your concierge physician may use Pandecta insights as a foundation to create a tailored health strategy—connecting lifestyle, medical, and preventive measures that address multiple risks collectively, rather than in isolation. Importantly, proteome composition may also inform which treatments or preventive modalities are most effective for you, helping predict treatment response and guiding personalized care.

Continuous Monitoring

Repeated over time, the test builds a personal health trajectory. Subtle changes can be identified early, allowing your care team to adjust your plan proactively. In addition, interventions' effectiveness can be monitored allowing for data-driven adjustments.

Scientifically Rigorous

Pandecta's analysis is rooted in cutting-edge proteomics research and tracks over 400 clinically relevant biomarkers, supported by thousands of additional exploratory proteins. This ensures that the data is both reliable and at the forefront of innovation.

Elevating the Concierge Experience

Pandecta complements concierge care by enhancing the interpretation of existing diagnostic and preventive tests, while simultaneously shifting the focus from treating current conditions to anticipating future risks—providing foresight, clarity, and a new standard of personalized wellness.
